Approved by the World Agricultural Outlook Board. Summary released December 13. The next summary of the **Tobacco Outlook and Situation** is scheduled for release March 20, 1985. It will appear on several computer networks by 3:30 ET the same day. Full text and tables are also released electronically often several days before the report itself is published. For information on providers of electronic access to Outlook and Situation reports, write EMS/USDA, Rm., 440 GHI, Washington, D.C. 20250. Telephone (202) 382-9754.

Tobacco Outlook and Situation is published in March and September, with a Tobacco Yearbook scheduled for publication in December. Current annual subscription price: \$8 U.S., \$10 foreign. Order from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Make checks payable to the Superintendent of Documents.

Current subscribers will receive renewal notices from the Government Printing Office approximately 90 days before their subscriptions expire. Notices will be sent **ONLY ONCE** and should be returned promptly to ensure uninterrupted service.

SUMMARY

Large supplies dominate the 1984/85 U.S. tobacco outlook. Flue-cured and burley prices are up a little because 1984's crop is much better in quality than 1983's. Still, consumption is stable, stocks large, and demand sluggish.

Total U.S. tobacco production this year is forecast at 1.74 billion pounds, 22 percent above last year's drought-reduced crop. Increases in both acreage and yields boosted production. The outlook for 1985 points to a decline in production, since both basic and effective quotas will likely be down.

Although beginning stocks of tobacco were 1 percent lower this season than last, domestic supplies for 1984/85 are up 3 percent because of the larger crop. U.S. tobacco use for this season will likely fall short of production, leaving next summer's ending stocks about 4 percent higher than the 3.8 billion pounds carried into this year. However, leaf use may rise slightly in 1984/85, primarily because of an increase in exports.

Domestic cigarette consumption in 1984 may be down about 1 percent from last year. This decline, combined with a fall in exports, has led to a 2-percent drop in U.S. cigarette output this year. Output is up for both chewing tobacco and snuff, however.

Total cigarette consumption may decline a little further in 1985, with high prices, health concerns, and smoking restrictions the main causes. The volume of cigars and smoking tobacco consumed will probably continue to decline as well.

U.S. exports of unmanufactured tobacco during 1984 are likely to be a little lower than last year's 524 million pounds (238,000 metric tons or 630 million pounds, farm-sales weight). Exports of unmanufactured tobacco during January-October declined about 2 percent. Exports next year may increase a little because of the higher quality of the 1984 crop. But, the gain will likely be small because of the strong dollar, weak demand, and large overseas supplies.

Imports of unmanufactured leaf and processing scrap comprised 35 percent of all tobacco used by U.S. manufacturers during 1983/84--33 percent of tobacco used in cigarettes and 51 percent of that used in other products. January-October imports for consumption were 25 percent below a year earlier, and total imports (consumption) in 1984 are expected to decline sharply from 1983's 527 million pounds.

The International Trade Commission is investigating whether tobacco imports are interfering with the domestic price-support program for flue-cured, burley, fire-cured, and dark air-cured tobaccos. At present, there are no volume limits on tobacco imports.

The flue-cured supply for July 1984-June 1985, at 3.01 billion pounds, is down 1.5 percent from last year. Smaller beginning stocks and marketings caused the decline. With marketings below indicated use, ending stocks are expected to decline about 40 million pounds from this year's 2.17 billion.

The national flue-cured marketing quota for 1985 is 3.7 percent below 1984. The effective quota (reflecting adjustments for net overquota marketings) is estimated at 755 million pounds, 9 percent lower than 1984. Price supports are likely to be unchanged from 1984.

The burley supply for October 1984-September 1985 is estimated at 2.04 billion pounds, up 11 percent. The October 1 carryover rose 2 percent. As of December 1, the 1984 crop estimate was 740 million pounds, 41 percent above 1983's marketings. However, marketings will fall short of this figure because of marketing quota restrictions.

The marketing quota for burley and acreage allotments for several other kinds under quota will be announced by February 1. Supplies of fire-cured, dark air-cured, and Maryland tobaccos are higher, while cigar tobacco supplies are lower.

TOBACCO PRODUCTS

Cigarette Production Lower

Falling sales will likely cause 1984 cigarette production to decline about 2 percent from 1983 (table 1). U.S. consumption during January–September 1984 totaled about 450 billion cigarettes, 1 percent or 5 billion lower than a year earlier. Cigarette consumption may decline a little further during the next 12 months, because of increased prices, antismoking publicity, and restrictions on where cigarettes can be smoked. Although sales of low-tar, low-nicotine cigarettes rose sharply from 1970 to 1981, they declined in 1982 and 1983 and may have remained at the lower 1983 level in 1984.

Retail cigarette prices in October 1984 were 5 percent higher than a year earlier. This increase is 1-1/4 times that of all consumer prices during the period. Four States raised cigarette excise taxes this year, compared with 14 in 1983. By September, the weighted-average State tax was 15.4 cents a pack, 0.3 cent above a year earlier (table 3).

New Legislation Changes Cigarette Warning Labels

The President signed legislation on October 13 that deals with rotating health warnings on cigarette packages and printed advertisements. Effective October 13, 1985, four separate messages about the hazards of smoking will be rotated at about 3-month intervals. All cigarette packages will bear one of the following warnings:

- Surgeon General's Warning: Smoking causes lung cancer, heart disease, and emphysema.
- Surgeon General's Warning: Quitting smoking now greatly reduces serious health risk.
- Surgeon General's Warning: Smoking by pregnant women may result in fetal injury and premature birth.
- Surgeon General's Warning: Cigarette smoke contains carbon monoxide.

Warnings on cigarette packages will be about 50 percent bigger than present ones and surrounded by thicker lines. Similar warnings will be posted on billboards and published ads for cigarettes. Manufacturers and importers are required to submit their plans for rotating the warnings to the Federal Trade Commission for approval.

The warnings will replace the current required label, which states: "Warning: The Surgeon General Has Determined that Cigarette Smoking is Hazardous to Your Health."

Other Tobacco Use Mixed

Both production and sales of chewing tobacco increased in the third quarter from a

1/ Includes leading brands. A 3-percent discount is made for payment within 10 days or 2 percent within 14 days. 2/ Effective January 1, 1983, the Federal excise tax doubled to \$8.00 per 1,000 cigarettes. 3/ For 1940-74, see TS-151, March 1975; for 1974-76, see TS-177, September 1981. 4/ Manufacturers increased prices by a different amount. The change shown represents a major manufacturer whose prices were between the highest and lowest. 5/ The January price increase brought major manufacturers' prices in line.

Cigarettes Produced and Tobacco Used

Per Capita Consumption of Tobacco Products

year earlier, and total production for the year may rise a little from last year's 87 million pounds. Snuff production for the first 9 months was about 4 percent above the same period in 1983.

Third-quarter domestic use of smoking tobacco—including imports—was down from a year earlier. For all of 1984, smoking tobacco consumption may drop 10 percent from last year.

Consumption of large cigars (including cigarillos) totaled 2.65 billion during January–September, 2 percent less than a year earlier. The total for the year will likely be down by a similar percentage (table 2). With rising prices, sales of lower priced cigars have fallen, and a larger proportion of total sales volume has become concentrated in the higher price categories. This pattern is expected to continue in 1985.

U.S. EXPORTS AND IMPORTS

Total Exports for 1984 Down

Exports of unmanufactured tobacco were 3 percent below a year earlier during July–October, but 2 percent below during January–October. The July–October decline probably reflected reduced purchases of the poor-quality 1983 crop, particularly burley and Maryland. Shipments in the last 2 months of the year may be above November–December 1983. However, total 1984 exports will likely be 500–520 million pounds, short of last year's 524 million pounds (238,000 metric tons, equivalent to 630 million pounds, farm sales weight) (table 6).

Calendar 1985 exports may be up slightly because of the improved quality of the 1984 crop. But, the strong U.S. dollar, high U.S. prices, weaker demand, and large overseas supplies at prices attractive to foreign manufacturers will limit U.S. sales.

A large January–October 1984 decline in exports was registered for burley, the second major export class; however, there was an increase in the major class, flue-cured. Kentucky–Tennessee fire-cured exports fell, while Virginia fire- and sun-cured about tripled. Dark air-cured and cigar exports both rose, but Maryland exports dropped sharply.

Among major U.S. markets, both Asian and African markets took less, while Europe outside the European Community (EC) took more. However, the EC countries took about 3 percent less (tables 5 and 6). Exports under USDA-financed programs such as P.L. 480 and

1/ Subject to revision. For 1960-76 data see TS-157, September 1976, p.14.

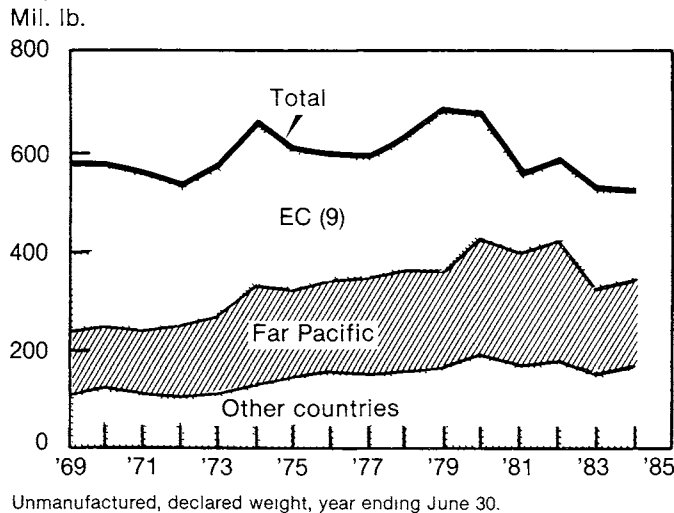

Mutual Security and Aid were nil this past fiscal year (table 7). However, tobacco exports under USDA's GSM-102 Export Credit Guarantee program totaled \$82.5 million in FY 84, compared with \$30.4 million in FY 83. Iraq, Egypt, and Jamaica participated in the program. Iraq represented a new market, with purchases of \$17 million under the program.

Imports Decline Sharply

Through October 1984, U.S. tobacco imports for consumption (duty paid) were 25 percent below a year earlier (table 8). A sharp decline occurred in the category classified as manufactured or not manufactured, NSPF, because much of the imported cigarette tobacco that is threshed or shredded is now classified as stemmed cigarette leaf--item 170.3500 on the tariff schedule of the United States.

Much of the decline in imports in 1984 can be attributed to the tariff reclassification, which resulted in unusually large imports for consumption in 1983. The change raised the duty from 17.5 cents per pound to 32 cents (now 29 cents) on the affected tobacco. Consequently, import declarations rose sharply

Export Markets for U.S. Tobacco

during the weeks after the tariff reclassification was announced and before it became effective. Cigarette leaf and cigarette and cigar scrap tobacco rose.

Imports for consumption may decline again next year. However, even with increased purchases of U.S. loan stocks, the decline will likely be small, since foreign-grown tobacco is cheaper than U.S. and supplies are ample.

1/ Preliminary. 2/ Includes minor quantities for smoking tobacco, chewing tobacco, and snuff. Detail may not add to total due to rounding.

Compiled from publications and records of the Bureau of the Census.

January-October 1984 arrivals of tobacco (general imports) were up 7 percent from the year-earlier level. Cigarette and cigar leaf were up, but cigarette and cigar scrap declined.

U.S. stocks of foreign-grown cigarette and smoking tobacco rose from October 1, 1983, to October 1, 1984. This October, stocks totaled 944 million pounds, (farm-sales weight), 7 percent above a year earlier. Nearly three-fifths of the foreign-grown stocks consisted of flue-cured and burley.

ITC Investigating Imports

The U.S. International Trade Commission (ITC) is investigating whether flue-, fire-, and dark air-cured and burley tobacco are imported under such conditions that render ineffective or materially interfere with the USDA tobacco programs. The ITC investigation results from a request by the Secretary of Agriculture to the President, in which the Secretary indicated that imports may be hindering the support program for U.S. tobacco. Section 22 of the Agricultural Adjustment Act of 1933, as amended, provides that after the ITC study and recommendation, the President may impose import quotas or fees to protect USDA programs. The ITC will hold hearings on January 3.

Because of a substantial increase in imports of flue-cured tobacco in the late

1970's, USDA requested import quotas once before, in 1981. However, the ITC did not agree. Thus, at present there are no quantitative restrictions on tobacco imports.

U.S. TOBACCO LEAF SITUATION AND OUTLOOK 1/

1984 Marketings and Cash Receipts Up

U.S. tobacco production in 1984 is likely to be 22 percent above the 1983 drought-reduced crop but 12 percent below the 1982 crop. Flue-cured effective quotas were lower but burley quotas were higher than in 1983. Total acreage was 1 percent greater than last year, but next to the lowest area since 1889. Average yield for all tobacco was up 20 percent. Improved growing conditions raised burley yields 42 percent; flue-cured yields were up 8 percent (table 9). As measured by USDA official grades, the quality of both flue-cured and burley improved from last year.

This year's flue-cured crop is about the same as marketings in 1983, but supplies have been lowered by about 1-1/2 percent. The

1/ All quantities in this section are stated in farm-sales weight equivalent, unless otherwise noted.

1/ November 1 indications estimated with State funds, except for burley, which is December 1 and a national estimate.

Tobacco Acreage, Yield and Production

% of 1967

large burley crop has increased supplies about 11 percent.

Prices for all tobacco this season may average around 4 cents a pound more than last season, setting a record. Despite weak demand, the better quality crop is bringing higher prices. The volume of tobacco placed under loan this season will likely fall short of the 1982 and 1983 seasons. Still, loan receipts may exceed 400 million pounds and boost loan holdings to record levels. With higher prices and a larger crop, 1984 cash receipts from tobacco will exceed those of a year earlier.

1985 Marketing Quotas and Allotments Lower for Flue-Cured

The 1985 national basic quota for flue-cured tobacco is 3.7 percent below 1984. When the net overmarketings from the 1984 crop are subtracted, the effective quota (sum of individual farm quotas) is down 9 percent. The national acreage allotment was set at 389,643 acres, 4 percent below 1984.

By February 1, USDA will announce the 1985 marketing quotas and acreage allotments for burley and several other kinds of tobacco. Shortly after that announcement, growers of fire-cured, dark air-cured, and Connecticut-Massachusetts binder will vote in referenda for or against marketing quotas on their next three crops. If at least two-thirds of those voting approve, marketing quotas will be in effect. Producers of flue-cured, burley, Ohio filler and Wisconsin binder, and sun-cured tobacco approved quotas in previous referenda.

Flue-Cured Stabilization Announces Discount Prices

On October 29, the Flue-Cured Tobacco Cooperative Stabilization Corporation announced a special offer of reduced prices for loan stock tobacco. Discounts of 50 to 90 percent off established base prices are offered on 1976 through 1981 crops, with the older crops having the largest discounts. Prices of 1982-84 tobacco are discounted 10 percent. To obtain the large discounts for the older tobacco (1976-81), the purchaser must buy from the newer tobacco (1982-84) at a ratio of 2 pounds of newer tobacco to 1 pound of older. By early December, about 77 million pounds of tobacco had been sold under the discount program.

Burley Price Supports To Rise; Most Other Types Likely Unchanged

Price supports for flue-cured and other types, except burley, will likely be unchanged in 1985. Puerto Rican supports may be reduced further. Under the Dairy and Tobacco Adjustment Act of 1983, support prices for all but burley can increase only if the 3-year moving average of prices paid by farmers (including wage rates, interest, and taxes) increases more than 5 percent. It appears the index of prices paid will increase only about 3 percent. Burley support in 1985 will again be determined by the basic formula, which may permit a 3 to 3-1/2 percent increase. However, under the No-Net-Cost Tobacco Program Act of 1982, the Secretary of Agriculture could hold the increase to 65 percent of the increase under the basic formula, which would mean a raise of around 2 percent.

For tobacco marketed in 1984, the required contributions to the no-net-cost fund or account range from 2 to 9 cents a pound (table 10). The contribution varies from 2 to 3 cents for fire- and dark air-cured types, and from 2 to 8 cents for cigar types (excluding Puerto Rican cigar type 46, which has not yet been determined). For burley, it is 9 cents, and for flue-cured, it was 7 cents. The rates for 1985 have not yet been established.

Foreign Leaf Production Declines Slightly

Global leaf production for 1984 is forecast at 13.5 billion pounds (6.13 million

metric tons), slightly above last year's 13.4 billion (6.07 million metric tons). Production in China is up a little from a year earlier and U.S. production is up. Increased output in Greece, Zimbabwe, Yugoslavia, Argentina, and Japan will likely be offset by declines in India, Brazil, the Soviet Union, Indonesia, the Republic of Korea, and Thailand. Flue-cured production is up a little from 1983. Burley production is up about 18 percent. Oriental, dark air/sun-cured, and cigar tobaccos are down, but dark fire-cured output is up.

Auction Prices Rise for Flue-Cured in 1984

Prices for the 1984 flue-cured crop rose about 2 percent, compared with a slight decline a year ago. With volume larger, the value of 1984 production rose about 6 percent from a year earlier. Loan placements were down. Considering purchases from both the crop and Stabilization stocks, industry takings were up.

1/ Preliminary.

Compiled from records and reports of Tobacco Division, AMS.

With demand for lower-stalk tobacco a little stronger, early-season prices averaged somewhat higher than a year ago. The price difference between this season and last narrowed during September and October, but the better quality offerings from the 1984 crop kept prices above a year ago.

Compared with the 1983 season, prices of primings, lugs, and nondescript tobacco were higher, while cutter and leaf prices were lower. Increases were generally 2 to 10 cents a pound. The season-average price for gross sales (including resales) was \$1.81 a pound—up 3 cents from last year. Average prices were up in three of the four flue-cured belts but down in the eastern North Carolina area. Among the 84 markets, season averages ranged from \$1.69 to \$1.91 a pound.

Despite the reduced effective quota, producers' marketings were only 1 percent below last season. Auction sales totaled 845 million pounds, about 10 million less than in 1983.

Compiled from records and reports of the Bureau of the Census.

Larger Proportion of Good Grades

Crop quality was better than last year because of improved growing conditions. There was a larger proportion of fair and good grades in 1984 and less low, poor, and nondescript tobacco. The share of leaf and cutters increased, and there was a larger amount of ripe or mature kinds and less variegated or green tobacco (table 14).

Loan volume was 19 percent of sales, down from 23 percent (including carryover) in 1983. Lug, leaf, and cutter grades comprised most of the loan receipts.

Auction Sales Ended November 8

Sales in the Georgia-Florida area opened July 25, 10 days later than usual, but still ahead of crop maturation. Despite the late opening, sales ended November 8, about a week earlier than normal.

The sales opportunity averaged about 85 million pounds weekly, about the same as last year, and resale allowance for warehouses remained at 10 percent. Again this season, growers designated a warehouse for the sale of their crop, and the USDA Flue-Cured Tobacco Advisory Committee recommended opening dates and selling schedules. Selling times were allocated according to grower designations. Growers could change their designation at the beginning of each month, if they wished.

Resales averaged 8.6 percent of gross sales, about 0.5 percentage points more than in 1983. About 5-1/2 percent of the tobacco was sold outside the belt where it was produced (table 13). Again this season there was no provision for the Stabilization Cooperative or warehouses to handle carryover tobacco. Because of the larger crop, there is likely some tobacco being held by individuals for sale next year.

Export Volume May Change Little

Despite the higher quality of the crop, 1984/85 flue-cured exports may change little from last year's 453 million pounds. Large supplies in Brazil and Zimbabwe, high U.S. prices, the strength of the U.S. dollar, and large cigarette tax increases in the United Kingdom, West Germany, and some other European countries are further contributing to the decline. Japan's purchases have also declined the last 2 years because increased prices have led to level cigarette sales. In general, larger, less costly stocks abroad are holding down our 1984/85 exports to most destinations.

Supplies Decline in 1984/85

Although carryin stocks were 2 percent smaller this season, the larger crop has kept the flue-cured supply at 3.01 billion pounds, 1-1/2 percent below last year (table 16). Based on the flue-cured States' estimate, the 1984 outturn was slightly above 1983

marketings (1983 production plus 1982 carryover). But marketings in 1984 were 1 percent lower than in 1983. Harvested acreage was down 4 percent but yield was 8 percent higher.

The prospect for about the same level of exports, together with likely lower domestic use this marketing year, means total disappearance may drop from last year's level. Next year's carryover could also be lower, with trade holdings likely to account for most of the decline.

The Flue-Cured Stabilization Cooperative sold 106 million pounds during January-November, while loan receipts reached 159 million. Thus, by January 1, 1985,

unsold loan stocks may increase a little from the 770 million pounds held a year earlier, despite sizable recent sales of discounted stocks.

1985 Quota Reduced

On December 12, USDA announced a national flue-cured quota of 775 million pounds for 1985 (table 11). The 3.7-percent reduction from 1984 was made to bring supply in closer balance with use.

Acreage allotments and poundage quotas will reflect 1984 under- and overmarketings. The base quota minus estimated net overmarketings means that the 1985 effective quota is about 755 million pounds, 9 percent

below 1984. A crop close to quota, when added to prospective carryover, would provide a 1985/86 supply that is a little smaller than this year.

*Foreign Flue-Cured Situation:
Canadian, Indian Crops Smaller*

This year's flue-cured production in Ontario is estimated at 195 million pounds, 19 percent below last year. Auctions opened on October 9, and by mid-November sales averaged Can\$1.43 a pound, about 20 cents below last season. The Canadian Manufacturers Council gives rebates of up to 15 cents a pound, depending on grade, for exports. Canadian exports were down about 20 percent in 1983, largely because of a big drop in shipments to Great Britain. Exports are estimated at about 71 million pounds in 1984.

Brazil's production of flue-cured tobacco rose about 3 percent in 1984, and it may rise a little further in 1985. Grower prices are about 180 percent above 1983 but still below the inflation rate of 210 percent. India's 1984 crop is 37 percent smaller than last year. Still, prices are lower than last year because of large supplies and weak demand.

The 1984 flue-cured crop in Zimbabwe rose 16 percent (table 18). Markets closed in late October. Prices averaged about US\$1.20 per pound.

Burley Prices Higher

Before-Christmas burley sales totaled 479 million pounds (gross) and averaged \$1.88 a pound. Growers sold about three-fifths of the

Table 18--Flue-cured tobacco: Production in specified countries, 1982-84

Compiled from records and reports of Foreign Agricultural Service.

crop before Christmas. Sales resume January 7 (table 20).

Burley auction prices before Christmas averaged about 9 cents a pound higher than last year. Price supports are unchanged, but crop quality is better and demand is stronger than for the drought-stressed 1983 crop. Sales contained a smaller percentage of unripe and immature than last year. Also, the percentage of fair and low quality was lower, with more fine and good.

Loan rates by grades range from \$1.26 to \$1.95 a pound, with an average support level of \$1.751. Virtually all grade rates remain supported the same as in 1983. Before Christmas, loan receipts were about 27 percent of producer sales. For all of last season, receipts totaled 49 percent of producer sales (including 1982 carryover tobacco).

For 1984/85, USDA will provide official grading for burley tied in hands, for untied burley packed straight in bales, and for untied burley placed in sheets and offered for sale at auction. Most of the 1984 burley crop is being sold untied in sheets or in bales.

Burley Tobacco: Supply, Price, Use

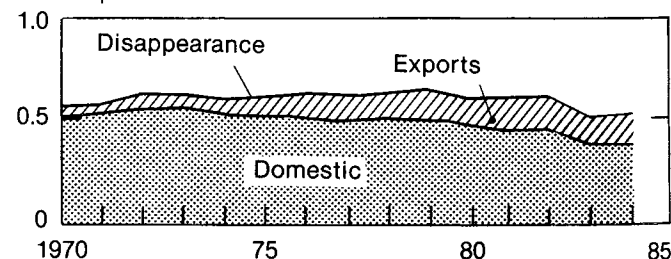

Billion pounds

¢ per pound

Billion pounds

1984 subject to revision. Trade stocks include manufacturers' and dealers'. Crop year beginning October 1. 1984 disappearance forecast.

1983/84 Disappearance Declines

During the year ending September 30, 1984, burley disappearance totaled 501 million pounds, 13 percent below the previous year and 21 percent below 1979's record high. The 1984 disappearance was the lowest since 1945. Domestic use dropped 12 percent and exports fell 17 percent. The poor-quality 1983 crop, together with high U.S. prices and the strong dollar, reduced exports to 112 million

pounds, 23 million below the previous year and 29 million below the record set in 1981/82.

West Germany, Italy, and Japan remained the leading markets. Lower cigarette demand, together with increased use of imported burley, cut domestic use. Total use may increase in 1984/85 because exports are expected to rise substantially and domestic use may rise a little. The larger, higher quality 1984 crop will likely boost exports.

Supplies Jump

This season's burley supply, at 2.04 billion pounds (estimated marketings plus carryover), is 11 percent above a year ago (table 16). The 1984 crop, estimated at 740 million pounds as of December 1, is 41 percent above last year's marketings. However, because of marketing quota restrictions it is estimated that nearly 700 million pounds will be marketed.

This season's effective farm poundage quota was 7 percent above last year, even with a cut in the basic quota. Growers increased acreage 9 percent, and yields were up 42 percent.

Despite the reduced 1983 crop, carryover on October 1 rose 2 percent from a year earlier and was the largest since 1971. The increase was the result of a sharp rise in loan stocks; manufacturer and dealer holdings declined. With the large crop, carryover next October 1 is expected to rise again. Loan holdings may reach an alltime high of more than 500 million pounds because of large takings from the 1984 crop. The 1984/85 supply is about 4.0 times probable disappearance, well above the desirable ratio of 2.6. In addition, manufacturers and dealers held 282 million pounds of foreign-grown burley on October 1, 11 million more than a year earlier.

1985 Quota Decision Due by February

The 1985/86 outlook for burley hinges partially on the quota decision USDA will make by February 1. Burley poundage quota legislation requires that the national quota be neither less than 90 percent of estimated disappearance for the marketing year nor less than 90 percent of the previous year's quota. For 1984/85 the basic quota was set at 582 million pounds. Disappearance may rise because exports are expected to increase and domestic use may also go up a little.

With production above the effective quota, marketings this year are expected to exceed the effective quota, likely causing next year's effective quota to be below the basic quota.

Southern Maryland Disappearance Down for 1983/84

During the year ending September 30, 1984, disappearance of Maryland tobacco was nearly 34 million pounds, 5 million below the previous year and the lowest since 1980.

Domestic use of Maryland tobacco rose 4 million pounds from 1982/83, but exports totaled only 4 million. Switzerland's takings dropped sharply and constituted only 34

1984 2/	28.3	1,403	39.7	45.0	84.7				

1/ Year beginning October 1. 2/ November 1, crop estimate. Economic Research Service estimates derived from Crop Reporting Service, Maryland and Pennsylvania State estimates.

percent of Maryland exports, down from 55 in 1982 and 63 in 1981. West Germany's imports also fell significantly. Because of the better quality 1984 crop, exports will likely rebound in 1984/85 and total use may rise.

Supplies Gaining

Total carryover (including the 1983 crop) on January 1, 1985, is expected to be about 5 million pounds above a year earlier. The 1984 crop is estimated at 40 million pounds, 2 million above the previous season. The 1981 Farm Act provides prohibitive penalties for growing and marketing Maryland tobacco in quota areas. However, quotas are not applicable to Pennsylvania seedleaf tobacco and prices for it are low, so some seedleaf growers are changing to Maryland tobacco. In 1984, about a fifth of total Maryland tobacco production was in Pennsylvania, about the same as in 1983.

The supply for 1984/85 is about 85 million pounds, 7 million more than a year earlier. Auctions for the 1984 Maryland crop will begin in March 1985.

Fire-Cured Auction Prices Down

Auctions for Virginia fire-cured tobacco (type 21) opened November 27, with prices for the first 7 days averaging 11 cents a pound below last season. The quality was higher but grade prices were down, generally running 3 to 15 cents a pound lower for fair and low quality

grades of heavy leaf, thin leaf, and lugs. Prices of fine and good quality tobacco were closer to last year's. This year's Virginia crop is about 900,000 pounds higher than last year's. Auctions for Kentucky-Tennessee fire-cured are expected to open on January 22.

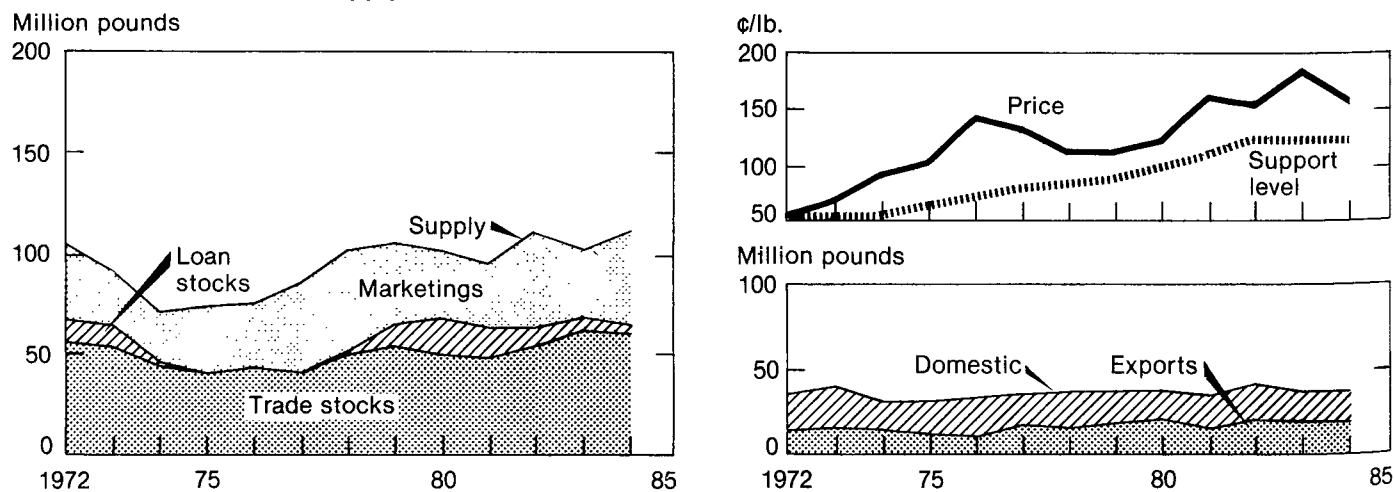

The 1984 fire-cured crop is estimated at 52 million pounds, 14-1/2 million or 39 percent larger than a year ago. The increase raises the 1984/85 supply to 124 million pounds. Based on last year's use, this amount would last about 2.8 years. On October 1, the beginning of the marketing year, loan stocks had dropped about 2-1/2 million pounds from a year earlier. Disappearance varies widely from year to year, but it will not likely be large enough to reduce total carryover by next October 1 (table 22).

Disappearance Down

Disappearance of fire-cured types in 1983/84 was 44 million pounds—about 2 million below the previous season. Domestic use declined but exports rose. Output of snuff increased, and chewing tobacco production was about stable.

In Malawi, the largest exporter of fire-cured outside the United States, 1983 production was 17 million pounds, up 1 million from the year before. Malawi's 1984 production was estimated at 36 million pounds in November. Large surplus stocks from earlier crops have been reduced, but higher

Fire-Cured-Types 22-23: Supply, Price, Use

1984 subject to revision. Trade stocks include manufacturers' and dealers'. Crop year beginning October 1. 1984 disappearance forecast.

1/ Less than 50,000 pounds. 2/ November 1 crop estimate. Economic Research Service estimates based on Crop Reporting Service State estimates and estimates by type within States with State funds when available. 3/ Includes 400,000 pounds fire loss, December 1976.

1984 production in Malawi may hurt U.S. export prospects. A shift to roll-your-own cigarettes has boosted demand for fire-cured in some European countries.

Dark Air-Cured Auction Prices Decline

Auctions for One Sucker and Green River tobacco (Kentucky-Tennessee dark air-cured, types 35-36) opened December 3 and 4, respectively. Auctions for Virginia sun-cured (type 37) also started December 4. Growers received substantially less for each type than they did last season. The larger size of the crop, together with ample supplies from previous crops, caused the reduction in prices.

Carryover To Rise

At an estimated 18.2 million pounds, the dark air-cured crop is up 3.5 million from 1983 because of increased acreage and higher yields. The 1984/85 supply of dark air-cured and sun-cured tobacco, at 62.3 million pounds, is 3.8 million above 1983/84. Total supplies of dark air-cured represent about 4.3 years' use, based on last year's disappearance. Carryover may rise a little, because disappearance is likely to fall short of production. Stocks of air-cured tobacco will remain large.

Disappearance of dark air-cured during 1983/84 was 14.4 million pounds, 1.9 million lower than the previous marketing year. While the output of snuff increased, other traditional uses stabilized or declined. The rise in prices for the 1983 crop may have helped lower dark air-cured use.

Cigar Tobacco: U.S. and Puerto Rican Supplies Decline

Supplies of U.S. and Puerto Rican cigar tobacco are down about 5 percent in 1984 because production has declined the last 2 years. Nevertheless, on October 1, loan stocks

stood at 21.3 million pounds, 2.5 million above a year earlier.

Filler and wrapper output are up; binder output is down. U.S. cigar output is sold either directly on farms or through cooperatives. As of early December, no 1984 crop sales had been reported. Season-average prices will be published in the May 1985 issue of USDA's *Crop Production* report.

Supplies of continental cigar filler (U.S. and Puerto Rican types 41-46) declined about 6 percent to 79 million pounds because of a smaller carryin. Filler carryover was 7 million pounds lower but production was about 1-1/2 million higher. Recent disappearance indicates that ending stocks are likely to decline by the close of the marketing year.

Supplies of cigar wrapper tobacco for 1984/85 are about 1/2 million pounds above last year. Connecticut Valley supplies are up, while Georgia-Florida wrapper supplies are down. Type 62 tobacco has not been grown since 1977. The cigar wrapper carryover next July 1 is likely to change little from this year.

For 1984/85, binder tobacco supplies will be down about 4 percent, because of smaller production and carryin. Cigar binder disappearance was 21 million pounds last season, down from a year earlier. The principal outlet for this type is looseleaf chewing tobacco. Binder disappearance has followed a cyclical pattern, so it may rise this year and draw stocks down.

During October 1983-September 1984, manufacturers used more imports than a year earlier--a response to stabilized cigar production and lower cost foreign supplies. Last season, 81 million pounds of cigar tobacco was imported for consumption. Stocks of foreign-grown cigar leaf in the United States on October 1 were 87.5 million pounds--about 2.5 million above a year earlier.

1/ October 1 for types 41-55; July 1 for types 61-62. 2/ November 1, crop estimate. Economic Research Service estimates based on Crop Reporting Service State estimates and estimates by type within States with State funds when available. 3/ Puerto Rican planting occurs late in calendar year. Price per pound excludes payment by Puerto Rican Government. 4/ See total for types 54 and 55. 5/ Not available. 6/ Includes Georgia-Florida shade-grown, type 62, which has not been grown since 1978. July 1, 1984, stocks were 0.1 million pounds. See TS-176 for annual supply and disappearance. *Less than 50,000 pounds.
